A

Imagine this is how you vote and count:

Everyone votes electronically on the same day. One national election body adds it all up. The result is there the same evening. There are no paper votes; each machine prints its result, and it goes online.

Read silently. Don't show it.

B

Imagine this is how you vote and count:

Every state has its own rules, and local offices do the counting. Many people vote by mail, and nearly all votes are on paper. The complete result takes days to weeks.

Read silently. Don't show it.
